

CHRISTOPHER CAPIZZUTO

Full-Stack Engineer (React, Next.js, TypeScript, Node.js) building data-driven products end-to-end—APIs, databases, geospatial systems, and niche utilities for solving real world problems.

U.S. Citizen with authorization to work without sponsorship | Fluent in English and Spanish

Yonkers, NY | (347)-462-6803 | Chriszcodes@gmail.com | [GitHub.com/capisz](https://github.com/capisz) | [Capiszportfolio-github-io.vercel.app](https://capiszportfolio-github-io.vercel.app)

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, HTML5, Swift, CSS3 | Familiar: Python
 - **Frameworks/Libraries:** React, Next.js, Node.js
 - **Databases:** MongoDB, PostgreSQL, PostGIS
 - **Styling:** Tailwind CSS, JSX, SCSS, Radix UI
 - **Tools:** Git/GitHub, npm, VS Code, Electron
 - **Platforms & APIs:** Vercel, Firebase, Stripe, Amadeus API, fly.io, NYC Open Data
-

PROJECTS

CareCation – Health Tourism Booking Platform • [\[Live\]](#) • [\[GitHub\]](#) • [\[Demo\]](#) • [\[Architecture\]](#) — *React, Next.js, TypeScript, Tailwind, API Routes, Stripe, Amadeus API*

- Built a full-stack medical travel platform integrating real-time flight/hotel search and Stripe payments.
- Implemented Amadeus API integration with token lifecycle management and secure webhook validation.
- Implemented secure server-side API routes with environment-based configuration for third-party integrations.

Pidge – NYC Parking Intelligence (iOS + CarPlay) • [\[GitHub\]](#) • [\[Demo\]](#) • [\[Architecture\]](#) — *SwiftUI, MapKit, Node.js, TypeScript, PostgreSQL, PostGIS*

- Built a SwiftUI + MapKit iOS app converting NYC curb regulations into a real-time parking map with rule-change countdowns—to be expanded into a live parking space availability app.
- Engineered a geospatial backend with PostGIS spatial indexing and viewport-bounded queries for live curb availability computation.
- Ingested and normalized NYC Open Data into a unified street-segment model (temporary rules, signs, hydrants, live-timing, meters) for live map rendering.

Pokémon Prize Checker • [\[Live\]](#) • [\[GitHub\]](#) • [\[Demo\]](#) — *React, Next.js, TypeScript, Tailwind, REST APIs*

- Engineered deterministic tool that uses deck import, shuffle, and prize-selection logic to model game rules and scoring with predictable outcomes.
- Built reusable UI/state abstractions using hooks (useState, useEffect, useCallback, useMemo) to control transitions and reduce unnecessary re-renders.
- Implemented session persistence to preserve rank/progress across reloads and devices.

Dragapultist – TCG Analyzer • [\[Live\]](#) • [\[GitHub\]](#) • [\[Demo\]](#) • [\[Architecture\]](#) — *React, Next.js, TypeScript, Tailwind, MongoDB, Electron*

- Designed indexed MongoDB schemas and aggregation pipelines to compute win rates, matchup statistics, and decision-frequency metrics.
 - Built Electron desktop distribution enabling local persistence and automated data ingestion.
-

EDUCATION

Baruch College (CUNY) — B.B.A. in Digital Marketing, 2020

Technical Coursework: Data Analytics, SQL & Relational Databases, Web Architecture, Automation Systems

Codesmith — Full-Stack Software Engineering Program, 2021
